PROFESSIONAL EXPERIENCE

SERVICE MEDIA CONSULTING

Web developer • 2022 - 2023

I have developed an e-commerce application using the MERN stack, which includes product listings, a shopping cart, and integrated payment using React.js, Node.js, and MongoDB. Additionally, I developed a reservation application using the MERN stack for hotel management, enabling users to search, book, and manage their reservations. Furthermore, I have successfully completed multiple social media clone projects, replicating features from popular platforms, including user authentication, post creation, and social interactions.

WeHelp

Web developer • Mai 2021- Juin 2021

I've developed a platform akin to Stack Overflow utilizing Next.js for both client and server-side rendering, along with MongoDB for database management. This platform serves as a comprehensive community-driven hub where users can ask questions, share insights, and collaborate on various topics spanning technology, programming, and beyond. Through intuitive user interfaces and robust backend functionalities, the platform facilitates seamless interaction and knowledge exchange among users, fostering a vibrant ecosystem of learning and problem-solving.
